

SHIPPER BOX AND PULP SHIPPER INFORMATIONAL STATEMENT

Waterloo Container offers shipper boxes and pulp shipper sets as a convenience to assist you with affordable solutions to your shipping needs. We have had our shipper boxes and pulp shipper boxes tested at a certified ISTA testing lab to ISTA 3A standards. Package testing is a comprehensive process that simulates the real world of the supply chain by emulating various conditions and activities in a lab environment. Pulp shippers performed better than flat stock shippers during rough test conditions, especially when bottles were filled. As a result of this testing, we recommend use of Pulp Shippers for all filled glass bottle products.

Waterloo Container cannot control WHAT a customer packs into a shipper box (filled or unfilled, weight, fragility etc.) or HOW they ship it (ie. FedEx, UPS, Other). Shipping providers have differing packaging requirements depending on content specifics and may or may not cover costs associated with damaged goods. Many shipping services do offer insurance at time of shipping to cover the contents. In lieu of insurance purchase, customers purchasing any type of shipper box must ultimately assume all liability for package contents.
